

CNC PROGRAMMER / OPERATOR

We are currently seeking an experienced CNC Programmer / Operator with 2-5 years of experience.

In this position you will program a flatbed multi-cam CNC, reading blueprints and translating them into cut programs and parameters for acrylic display cases, vitrines & pedestals. You will also:

- Ensure parts are programmed and manufactured in accordance with customer specifications.
- Ensures safety work practices and enforces safety policies.
- Adhere to Quality System.
- Machine setup
- Develop, recommends, and implement improvements to the CNC programming process including machining methods, tooling, and process control strategies.
- Participates in pre-production discussions for new designs and provide guidance on methods, tooling, and process controls.

Job Requirements:

- Program designs from a blueprint and model.
- Create tool sheets and set up instructions with each CNC Program.
- Read prints and maintain close tolerance dimensional quality.
- Work successfully with the process engineers and machine operators to ensure quality parts.
- Familiar with speeds and feeds.
- Must be flexible, able to 'shift gears' as needed, and to work successfully as part of a team.
